

Bodyguard tactical firearms drills

In partnership with WE Airsoft UK and WETTI (WE Tactical Training International) we are beginning a series of one day workshops focussed on tactical firearms and immediate action drills for the Close Protection Operative.

These drills which are recognised as good practice for the armed officer use exactly the type of handgun commonly used by bodyguards while operating in hostile environments. (Colt .45 ACP, Browning Hi Power, Beretta M9)

Manufactured by WE Airsoft these weapons are full metal 1:1 replicas of the real steel, using only the maximum load of the real firearm they represent reality based training which is now being utilized by US police departments and US Special Forces without the need for bulky and unrealistic armour. This type of training allows for freedom of movement in normal clothing when performing these survival skills, the only safeguard insisted on is eye protection.
